Text Books:

Reference Books:

Section A: Unit 1, 2, 3
Section B: Unit 4,5,6

PATTERN OF QUESTION PAPER
Six units in the syllabus shall be divided in to equal parts i.e. three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

For 80 Marks papers:
1) Minimum 10 questions
2) Five questions in each section
3) Question no.1 from section A and question no.6 from section B having weightage of 10 marks each be made compulsory and should have atleast eight bits of two marks out of which five to be solved.
4) Two questions from remaining questions from each section A and B be asked to solve each having weightage of 15 marks
## SEMESTER-I

### EXD201: ELECTRONICS DEVICES AND CIRCUITS-I

</tbody>
</table>

#### Unit 1

**Semiconductor Diodes:**
Band structure of PN junction, Quantitative theory of PN junction diode, Volt-amp characteristics, Temperature dependence, Transition and Diffusion capacitance of PN junction, Zener and Avalanche Breakdown, Varactor diode, Point Contact Diode and Solar cells, their construction and Characteristics (no Derivation)

**Diode Rectifiers:** Half wave, Full wave and Bridge rectifiers, Types of Filters, Ripple factor and Regulation characteristics.

#### Unit 2

**BJT Biasing and small signal models:**

#### Unit 3

**Field Effect Transistor and MOSFET:**
JFET and its characteristics, Pinch off voltage, Drain saturation current, JFET amplifiers, CS, CD, CG amplifiers, their analysis using small signal JFET model, Biasing the FET, The FET as VVR
Overview of DMOSFET, EMOSFET, Power MOSFET, n MOSFET, pMOSFET and CMOS devices, Handling precautions of CMOS devices, MOSFET as an Amplifier and Switch, Biasing in MOSFET, Small signal operation and models, Single stage MOS amplifier.

**Introduction to MOSFET as VLSI device:** VI characteristics equation in terms of W/L ratio, MOSFET capacitances, CMOS Inverter, Comparison of FET with MOSFET and BJT w.r.t. to device and Circuit parameter.

#### Unit 4

**Frequency response of Amplifiers and analysis:**
High frequency equivalent circuits for BJT and FET amplifier, Calculation of lower and Higher cutoff frequencies, Bode plot of frequency response, relation bandwidth and rise time, Compensation to improve the low frequency response of amplifier, Video amplifiers, Optocouplers, Heterojunction Bipolar transistor, BJT modeling.

#### Unit 5

**Feedback and Oscillators:**
Principle of Negative feedback in electronic circuits, Voltage series, Voltage shunt, Current series, Current shunt types of Negative feedback, Typical transistor circuits effects of Negative feedback on Input and Output impedance, Voltage and Current gains, Bandwidth, Noise and Distortion.
Principle of Positive feedback, Concept of Stability in electronics circuits, Barkhausen criteria for oscillation, RC, Clapp, WienBridge, Colpitt, Hartley, Tuned LC, UJT Relaxation oscillators (working and derivation of frequency of oscillators)

#### Unit 6

**Transistor at High Frequencies:**
Hybrid [] CE amplifier, Hybrid [] conductance, Hybrid [] capacitance, Validity at Hybrid [] model, Variation of Hybrid [] parameters, CE short circuit current gain, Current gain with resistive load, Single stage CE transistor amplifier response, Gain bandwidth product, Emitter follower at high frequency.

**Text Books:**

**Reference Books:**

**LIST OF PRACTICALS:**
1. To plot V-I characteristics of Junction Diode and Zener Diode.
2. For a Half wave rectifier with capacitor filter and to find the line and load regulation and ripple factor.
3. For a bridge rectifier with capacitor filter and to find line and load regulation and ripple factor.
4. To determine voltage gain, Current gain, Input Impedance, and Out impedance of Common Emitter amplifier.
5. Determine h-parameter for CE configuration.
7. Plot characteristic of CSFET. Determine amplification factor, transconductance and dynamic resistance.
8. Determine Input & output impedance and voltage gain and current gain for CSFET.
9. To plot characteristics of CS DMOS FET.
10. To observe effect of Bypass capacitor on frequency response of single stage CE amplifier.
11. To perform any one RC and LC oscillator.
12. To perform voltage series, voltage shunt and current shunt feedback topologies.

**Note:** Minimum eight experiments shall be performed from the above list. It is advised to conduct the practicals on Bread board.

**Section A: Unit 1, 2, 3**
**Section B: Unit 4, 5, 6**

**PATTERN OF QUESTION PAPER**
Six units in the syllabus shall be divided into equal parts i.e. three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

**For 80 Marks papers:**
1. Minimum 10 questions
2. Five questions in each section
3. Question no.1 from section A and question no.6 from section B having weightage of 10 marks each be made compulsory and should have at least eight bits of two marks out of which five to be solved.
4. Two questions from remaining questions from each section A and B be asked to solve each having weightage of 15 marks

</tbody>
</table>

**Unit 1**

**Basics and Network Theorem**
Types of Networks, Voltage & Current sources & their types, Star Delta transformation, Loop & Node analysis for DC, AC, Dependent & Independent Sources, Coupled networks. Network Theorems: Superposition Theorem, Thevenins Theorem, Nortans Theorem, Maximum Power Transfer theorem, Reciprocity Theorem, Millmans Theorem, Application of Theorem to DC and AC network with dependent and Independent sources.

**Unit 2**

**Network Topology**
Graph of Network, Concept of Tree and Co tree, Incident matrix, Tie set and Cut set matrix, formulation of equilibrium equations in matrix form, Solution of resistive networks, Principles of duality.

**Unit 3**

**Filters and Attenuator & Equalizers**
Parameters of Filters, Unit of Attenuation-Decibel and Neper, propagation constant, Classification of filter, Basic filter network, Design of Constant K filter & M Derived filters (Low pass, High Pass, Band Pass and Band Stop filters. Attenuators:, Symmetrical & Asymmetrical attenuators, two terminal & four Terminal equalizers.

**Unit 4**

**Two Port Networks**
Z, Y, ABCD, H parameter, Interconnection of Two port networks

**Unit 5**

**Transient Response**
Behavior of ckt under switching condition and their representation, Initial and final condition, Convolution integral, transform RLC ckt for AC and DC excitation, step, Ramp and impulse function and their Laplace Transform, waveform synthesis.

**Unit 6**

**Resonance**
Series and parallel resonance, variation of I, V with frequency in RLC ckt, frequency response of series and parallel ckt, Q factor, selectivity and Bandwidth of Series and Parallel Ckt.

**Text Books:**

2. Circuit theory & application by Sudhkar Palli
3. Networks & System by D.Roy Choudhary , New age international publication
4. Theory & Problem of Electric Circuit by A.Bruce Carlson, TMH
5. Electric circuit Analysis by S.N. Sivanandam,Vikas publication House
Reference Books:
1. Circuit analysis & Application by William D. Stanley, Pearson
2. Circuit analysis by M.E. Van Valkenburg, PHI

LIST OF PRACTICALS:
1. Study of Series Resonance
2. Study of Parallel Resonance
3. Study of Super Position Theorem
4. Study of Maximum Power Transfer Theorem
5. Study of Thevenin's Theorem
6. Study of Norton's Theorem
7. Study of Two Port Network Parameter
8. Study of Attenuator Circuit
9. Study of equalizer circuit

Note: Minimum eight experiments shall be performed from the above list.

Section A: Unit 1, 2, 3
Section B: Unit 4, 5, 6

PATTERN OF QUESTION PAPER
Six units in the syllabus shall be divided in to equal parts i.e. three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

For 80 Marks paper:
1) Minimum 10 questions
2) Five questions in each section
3) Question no.1 from section A and question no.6 from section B having weightage of 10 marks each be made compulsory and should have atleast eight bits of two marks out of which five to be solved.

**Unit-1**

**Overview & Basic Communication:**
Basebands, Concept of radio comm., Types of modulations, Amplitude modulation, Power relations, Modulation by several sine waves, Flywheel effect, Block diagram of AM transmitter, Single sideband technique, Balanced modulator, Methods to suppress unwanted sidebands, DSBC, ISB, Concept of VSB. Noise, different types of noise.

08 Hrs

**Unit-2**

**Angle Modulation:**
Concept of angle modulation, Frequency modulation and Phase modulation, Characteristics and frequency spectrum of FM wave, Bandwidth requirement, Comparison of AM, FM and PM, Direct and indirect method of FM generation.

06 Hrs

**Unit-3**

**Transmitters:**
TRF receiver, Super heterodyne receiver, AM receiver: RF amplifier, Image frequency rejection, Mixer, IF amplifier, Demodulator, AF and power amplifier, Sensitivity, Selectivity, Fidelity, Tracking, AGC.

06 Hrs

**Unit-4**

**FM Receiver:**
RF amplifier, Mixer, Amplitude limiter, FM Demodulators, Their comparison, SSB demodulator, SSB receiver.

06 Hrs

**Unit-5**

**Pulse and Digital Signals:**
Multiplex technique: TDM, FDM, Analog pulse modulation: PAM, PWM and PPM, Sampling theorem, Principles of PCM, Quantization noise, Differential PCM, Delta modulation.

06 Hrs

**Unit-6**

**Electro Acoustics:**
Microphones: Pressure operated and pressure gradient type, All types of microphones, Loudspeakers, Baffles and enclosures, Horns, Principles of optical and magnetic recording, Tone controls, PA system, Principles of TV signal generation.

08 Hrs

---

**update:**

lib. | HoD | ECT | Week | (prof. Results)
**Text Books:**
1. Kennedy & Davis: Electronic Communication Systems, TMH
4. Abraham Cohen: Hi-Fi Loudspeakers
5. A.M.Dhake: Television and Video Engineering, TMH

**Reference Books:**
2. Dennis Roddy & Coolen: Electronic Communication, PHI (Fourth Edition)

**LIST OF PRACTICALS:**
1. Study of RF signal generator
2. Determining modulation index of AM wave by using trapezoidal pattern.
3. Study of AM transmitter & receiver
4. Study of FM transmitter & receiver
5. Study of AM demodulator
6. Study of FM demodulator
7. Study/Perform PAM, PWM & PPM
8. Verification of sampling theorem with natural/flat top sampling
9. Study of PCM

Note: Minimum eight experiments shall be performed from the above list.

**Section A: Unit 1, 2, 3**
**Section B: Unit 4, 5, 6**

**PATTERN OF QUESTION PAPER**
Six units in the syllabus shall be divided into equal parts i.e. three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

For 80 Marks papers:
1) Minimum 10 questions
2) Five questions in each section
3) Question no.1 from section A and question no.6 from section B having weightage of 10 marks each be made compulsory and should have at least eight bits of two marks out of which five to be solved.

## Unit 1

**Introduction to data structure & Advance concepts in ‘C’**

Introduction to theory of data structures & its data types, Primitive and Non-Primitive data structures, Abstract data structure. Arrays: one dimensional & two dimensional arrays, Arrays as an ADT Insertion, deletion and traversals of arrays. Pointers: Basic concept, Concept of Functions & its types, Structures: Array of structures, passing structure to function, storage classes.

## Unit 2

**Stacks & Queues**

Stack, stack as an ADT, representation using arrays & linked list, Applications of stack, Concept of infix, postfix and prefix expressions ,The Queue and its representation, queue as an ADT, Circular Queue, priority queue , Applications of queue

## Unit 3

**Linked List**

Definition, concept, operation on singly linked list, Circular linked lists, doubly linked lists, Operations like insertion, deletion, searching, Updating, Applications of linked lists such as polynomial manipulation, Comparison of singly linked, circularly linked & doubly linked list

## Unit 4

**Graphs and Trees**

Definitions, basic terminology, representation & implementation of graphs, graph traversals, DFS, BFS, Shortest path, Spanning tree, Minimum cost spanning trees Definition, Basic terminology, operation on binary trees, linked storage representation for binary search trees, Basic operation on binary search tree such as creating a binary search tree, searching, tree traversals ,in-order, pre-order, post-order, tree application for expression evaluation & for solving sparse matrices.

## Unit 5

**Sorting & searching**

Different sorting tech, selection sort, bubble sort, merge sort, quick sort, heap sort, shell sort, radix sort, comparisons between different sorting techniques, Sequential searching, binary Searching, B trees, B+ trees,

## Unit 6

**Numerical methods:**

---

11
Text Books:
1) E Balgurusamy - Programming in ANSI C, Tata McGraw-Hill
2) ‘Data structure through C” by Yashwant P Kanetkar
3) Principals of Data structure using C and C++ by G.S.Baluja

Reference Books:
2) Data structure using C by Tanenboum
3) Numerical Analysis by S.S.shasrti
4) Numerical Methods for engineers by Chhapra

LIST OF PRACTICALS:
1) Write a „C” Programme for Merging of two arrays
2) Write a „C” Programme using function and pointers
3) Write a „C” Programme to implement stack
4) Write a „C” Programme to implement Queue
5) Write a „C” Programme to implement circular link list
6) Write a „C” Programme to implement graph traversal
7) Write a „C” Programme to implement binary search tree
8) Write a „C” Programme to implement merge and quick sort
9) Write a „C” Programme to implement Newton Raphson method
10) Write a „C” Programme to implement interpolation

Section A: Unit 1, 2, 3
Section B: Unit 4,5,6

PATTERN OF QUESTION PAPER
Six units in the syllabus shall be divided in to equal parts i.e. three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

For 80 Marks papers:
1) Minimum 10 questions
2) Five questions in each section
3) Question no.1 from section A and question no.6 from section B having weightage of 10 marks each be made compulsory and should have atleast eight bits of two marks out of which five to be solved.
4) Two questions from remaining questions from each section A and B be asked to solve each having weightage of 15 marks

#### Unit 1
1. **Mini Project:-**
   Students have to select any topic and complete mini project on it. He has to perform PCB designing, component selection, mounting, soldering and testing of mini project.
   It is expected by the student to submit printed report of mini project and deliver power point presentation and demo.

#### Unit 2
2. **Case Study:-**
   Survey of optoelectronics devices.

#### Unit 3
3. **Case Study:-**
   Applications of different frequencies in the frequency spectrum.

#### Unit 4
4. **Case Study:-**
   Students have to study any industry and submit the report regarding the organization processes and activities.

#### Unit 5
5. **Case Study:-**
   Implementation of small electronic circuit by using circuit simulation tools (eg. Circuit maker, pSpice, multisim, OrCAD, etc.)

**Reference Books:**

2. User manuals of PROTEL, PROTEUS, OrCAD, Microcap

Students are also advised to refer the latest internet search engines for the survey of the different topics of case studies.

Students have to perform following activities under the guidance of subject teacher.
Students have to submit report on case studies. They have to take reference from Internet searching and available reference books.

**Unit 1**

**Function of complex variable (Differential calculus):**

Introduction, Analytic function Cauchy Riemann equations in Cartesian and Polar form, Harmonic function, Taylor’s series & Laurent’s series (without proof), Conformal mapping (geometrical representation of function of complex variable), bilinear transformation.

04

**Unit 2**

**Function of complex variable: (Integral calculus):**

Line integral, contour integral: Cauchy’s integral theorem, Cauchy”s integral formula (without proof), Residues, Cauchy’s residue theorem, Integration along unit circle and along upper half of semi circle.

08

**Unit 3**

**Z Transform:**

Definition, Z transform of elementary functions, properties of Z transform, Inverse Z transform, Solution of difference equation by Z transform.

08

**Unit 4**

**Laplace Transform:**

Definition, Transforms of elementary functions, Properties & theorems of Laplace transforms(without proof ), transforms of periodic function, Heaviside unit step function, displaced unit step function, Dirac delta function, error function, Bessel” function of zero order.

08

**Unit 5**

**Inverse Laplace Transform and its applications:**

Inverse Laplace transforms by using i) properties, ii) partial fractions, iii) Convolution theorem, Applications to solve linear differential equations with constant coefficients (Initial value problems), Simultaneous Linear differential equations.

08

**Fourier Transform and its applications:**

Fourier integral, Fourier sine and cosine integral, complex form of Fourier integral, Fourier transforms Fourier sine and cosine transform and inverse Fourier transforms Finite Fourier sine and cosine transforms. Solutions of one dimensional heat equation by using Fourier transform.

**Text Books:**
2. Electronic Devices and Circuits, Theodore F. Bogart, Jeffrey S. Beasley, Guilermo Rico, Pearson publication.

**Reference Books:**
2) Electronics Devices and Circuits Theory, Boylestead Nashelsky, PHI Publication.
3) Electronic Devices and Circuits, Theodore F. Bogart, Jeffrey S. Beasley, Guilermo Rico, Pearson publication.

**LIST OF PRACTICALS:**
1. Study of RC integrator and differentiator for sine, square and pulse input.
2. Study of Clipper – positive, negative and biased type.
3. Study of clamper – Biased and unbiased type.
4. Study of transistorized astable multivibrator.
5. Study of transistorized monostable multivibrator.
6. To study of frequency response of RC coupled amplifier.
7. To study of frequency response of transformer coupled amplifier.
8. To study of frequency response of push pull / complimentary symmetry amplifier.
9. Study of Miller and Bootstrap time base generator.
10. Study of transistorized differential amplifier.

**Note:** Minimum 8 experiments shall be performed and it is advised to conduct on Bread board.

**Section A: Unit 1, 2, 3**
**Section B: Unit 4,5,6**

**PATTERN OF QUESTION PAPER**
Six units in the syllabus shall be divided in to equal parts i.e. three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

**For 80 Marks papers:**
1) Minimum 10 questions
2) Five questions in each section
3) Question no.1 from section A and question no.6 from section B having weightage of 10 marks each be made compulsory and should have atleast eight bits of two marks out of which five to be solved.
4) Two questions from remaining questions from each section A and B be asked to solve each having weightage of 15 marks
EXD252: DIGITAL LOGIC DESIGN

**Unit 1**

**Logic Families:**

Characteristics of digital IC’s, Bipolar logic families: Resistor-Transistor logic (RTL), Direct coupled Transistor logic (DCTL), Integrated Injection logic (I²L), Diode – Transistor Logic (DTL), High Threshold logic (HTL), Transistor-Transistor logic (TTL), Schottky Transistor-Transistor logic, Emitter Coupled logic(ECL).Unipolar logic Families: PMOS, NMOS, and CMOS. BiCMOS Logic Family, Tri-State Logic.

**Unit 2**

**Combinational logic design:**

**Unit 3**

**Data-Processing Circuits:**

Parallel Adder (IC7483), Arithmetic logic Unit (IC 74181), Multiplexers, Demultiplexers, 1-of-16 Decoder, BCD-to-Decimal Decoders, Seven-segment Decoders, Encoders, Exclusive–OR Gates, Parity Generators and Checkers, Magnitude Comparator, Read-only Memory, Programmable Array Logic, Programmable Logic Arrays. Introduction to HDL

**Unit 4**

**Sequential Logic Circuit:**

Flip-Flops: RS, JK, Race around condition, Master-slave JK, D, T. Edge triggered flip-flops, clocked flip-flop design, excitation table, flip-flop conversion, flip-flop characteristics, bounce elimination switch, design of Asynchronous (ripple) counter using flip-flop using IC’s, 4 bit up/down counter (positive and negative edge triggered), Shift register (modes of operation), 4-bit bidirectional using D/J-K, universal shift register, application of shift registers (Ring counter, sequence generator, Johnson’s counter) IC7495/74195

**Unit 5**

**Synchronous sequential machines:**

Design of synchronous counter using ICs, 4 bit up/down, mod N counters, Moore and Mealy machines, representation techniques, state diagram, state table, state reduction, state assignment, implementation using flip-flops, Applications like sequence generator and detection.
**Unit 6**

**Semiconductor Memories & convertor:**

Memory organization and operation, Expanding memory size, classification and characteristics of memory, RAM, ROM, EPROM, EEPROM, NVRAM, SRAM, DRAM, flash memory, A to D and D to A convertors.

**Text Books:**

**Reference Books:**

**LIST OF PRACTICALS:**

1. Study of basic logic gates.
2. Operation of Arithmetic building blocks
3. Study of Arithmetic logic unit (ALU IC 74181)
4. Code conversion operations: Binary to Gray, Gray to Binary
5. Multiplexers
6. Demultiplexers, Decoders & Encoders
7. Study of flip-flops: RS, JK, MSJK, D & T.
8. Counter Design
9. Shift registers
10. Study of A to D & D to A Convertors

**Section A: Unit 1, 2, 3**

**Section B: Unit 4, 5, 6**

**PATTERN OF QUESTION PAPER**

Six units in the syllabus shall be divided in to equal parts i.e. three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

**For 80 Marks papers:**

1) Minimum 10 questions
2) Five questions in each section
3) Question no.1 from section A and question no.6 from section B having weightage of 10 marks each be made compulsory and should have atleast eight bits of two marks out of which five to be solved.
4) Two questions from remaining questions from each section A and B be asked to solve each having weightage of 15 marks
### EXD253: SIGNALS AND SYSTEMS

<table>

<tbody>
<tr>
<td>Theory : 04 hrs/week</td>
<td>Theory Examination : 80 Mark</td>
</tr>
<tr>
<td>Practical : 02 hrs/week</td>
<td>Class Test : 20 Marks</td>
</tr>
<tr>
<td></td>
<td>Practical/Oral : 50 Marks</td>
</tr>
</tbody>
</table>

#### Unit 1

**Introduction to Signals:**
- Definition of signal, Classification of signals: continuous time and discrete time, Analog and digital, periodic and non periodic, deterministic and non deterministic, even and odd, energy and power.
- Basic signals and operations on signals: cosine, sine, exponential, unit step, unit impulse, ramp, triangular, rectangular, Amplitude scaling, addition, multiplication, differentiation, integration, time scaling, time shifting and folding.
- Representation of continuous time signals by its sample – Sampling theorem.
- Reconstruction of a signals from its samples, aliasing – discrete time processing of continuous time signals, sampling of band pass signals.

#### Unit 2

**System:** Definition, types of systems, Classification of CT and DT system: linear and non-linear, Time variant and time invariant, casual and non causal, static and dynamic, Stable and unstable, shift variant and invariant, Invertibility.

#### Unit 3

**System Analysis:**
- Introduction to LTI Systems, state space representation, Convolution integral, properties of convolution integral, linear convolution, different methods of convolutions, system properties in terms of impulse response.

#### Unit 4

**CT and DT system analysis using FT**
- Definition and necessity of CT and DT Fourier series and Fourier transforms. CT Fourier series, CT Fourier transforms and its properties. Problem solving using properties.
- Limitations of Fourier Transform. Analogy between CT FS and DT FS and its properties.
- Response of LTI system to exponential signals, periodic signals, application of Fourier series and Fourier transforms to the system analysis.

#### Unit 5

**Correlation:**
- Definition of correlation and correlogram. Introduction-correlation and correlogram, the correlation function: analogy between correlation and convolution, Conceptual basis, energy signals, power signals, auto-correlation: relation to signal energy and signals power, properties of auto-correlation, Cross-correlation: properties of cross correlation.
### Unit 6: Energy Spectral Density and Power Spectral Density

Definition of Spectral density, ESD, Properties of ESD, Physical interpretation of the ESD Numerical on ESD, PSD, Properties of PSD, Correlation, cross correlation and auto-correlation of CT energy signals and its properties. Numerical on PSD. Applications, interrelation between auto-correlation and ESD. Sampling theorem and its proof, effect of under sampling, sampling of band pass signals

### Reference Books:

3. B.P.Lathi: Linear Systems and signals
5. B.P. Lathi: Signals and Systems
6. Symon hykin: signals and systems
7. L.J.Nagrath : signals and systems (TMH)

### LIST OF PRACTICALS:
1. Program for sampling continuous time signal
2. Program for folding, shifting of digital signal
3. Program to generate impulse, unit step, ramp, sine wave, exponential signals,
4. Program for convolution and correlation
5. Program for compute magnitude and phase spectrum of given signals.
6. Program for Jury’s stability criteria
7. Program for circular convolution
8. Program to study the properties of Fourier transform
9. Program for linear convolution using DFT
10. Program to compute impulse response of systems
11. Program to compute even & odd part of given signals
12. Program to compute FFT.

**Note:** Minimum eight experiments shall be performed from the above list. It is advised to conduct the practicals. Perform any Ten programs with the help of any computational software like Matlab/OCTAVE Based experiments.

### Section A: Unit 1, 2, 3
### Section B: Unit 4,5,6
**Pattern of Question Paper**
Six units in the syllabus shall be divided in to equal parts i.e., three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

**SEMESTER-II**

**EXD254: ELECTRICAL MACHINES AND INSTRUMENTATION**

### Unit 1

**D.C. Machines:**
DC Machines, Construction, working principle (motor/generator), EMF equation of generator. Types and applications of DC generators, DC Motors and its characteristics, significance of back emf; applications of DC Motors, speed control methods and starters.

### Unit 2

**Polyphase induction motors and Synchronous Motors:**
Three-phase induction motors, principle of operation, construction, types, Torque equation, Torque-Speed characteristics, power stages, losses and efficiency, speed control, starters and applications. Construction of synchronous machines, principle of operation, starting methods, effect of load, effect of excitation on armature current and power factor, Hunting.

### Unit 3

**Special Machines:**
Working principle and applications of: Stepper motor, variable reluctance motor, FHP motor, Hysterisis motor, repulsion motor, Servomotors (AC and DC).

### Unit 4

**Sensors and Transducers:**
Classification and selection of transducers, Strain gauges, LVDT, temperature transducers, piezoelectric, photosensitive transducers. Need of signal conditioning and types, interfacing techniques of transducers with microprocessors/microcontrollers.

### Unit 5

**Industrial measurements and Industrial Applications:**
Measurement of vibration, Electrical telemetry, thickness, Humidity, thermal conductivity and gas analysis. Emission Computerized tomography. Smoke and fire detection, burglar alarm. Object counter, level measurement, ON/OFF timers, RTC sound level meter, tachometer, VAV meter.

### Unit 6

**I/O Devices and Displays:**
Recorders-X-Y Plotters its applications, Optical Oscillograph, cold cathode display, Florescent display, LED, LCD, Alphanumeric display, Bar graph displays.
### Text Books:

### Reference Books:
1. B.L. Thereja Vol-II
2. Ashpaque Teussin, Electrical Machine
3. Nagnath Kothari
4. P.S. Bhimbra
5. A.K. Sawhney
6. S.S. Kalsi
7. Handbook of polymers in Electronics by B.D. Malhotra

### LIST OF PRACTICALS:

#### A. Experiments (any four)
1. Speed control of DC motor.
2. Load test on DC shunt motor (T/Iq, T/N, N/fq) characteristics.
3. Torque slip characteristics of three phase induction motor.
4. Load test on 3-phase induction motor.
5. Speed control of 3-phase induction motor.
6. Study of different types of starters of induction motor.

#### B. Experiments (any four)
1. Study of potentiometer displacement transducer.
2. Study of strain gauge.
4. Study of burglar alarm.
5. Liquid level measurement.
6. Sound level meter.

**Note:** Minimum eight experiments shall be performed from the above list. It is advised to conduct the practicals.

Term work shall consist of any eight experiments based on syllabus or from the list.

Assessment: Actual performing in the lab.

Laboratory journal should contain clearly the objectives of the experiment.

### Section A: Unit 1, 2, 3

### Section B: Unit 4, 5, 6

### PATTERN OF QUESTION PAPER

Six units in the syllabus shall be divided in to equal parts i.e. three units in each part. Question paper shall be set having two sections A and B, as per weightage of units. Section A question shall be set on first part and section B on second part. Question paper should cover entire syllabus.

### For 80 Marks papers:
1. Minimum 10 questions
2. Five questions in each section
3. Question no.1 from section A and question no.6 from section B having weightage of 10 marks each be made compulsory and should have at least eight bits of two marks out of which five to be solved.
4. Two questions from remaining questions from each section A and B be asked to solve each having weightage of 15 marks
